Start well prepared.

Five points for your first conversation with an electrical installer. Gather what you already know and bring open questions to the appointment.

- [ ] **1. Parking space and building**

  Where is the car parked? Is the space allocated to you? Note its location and approximate distance from the building.

- [ ] **2. Journeys and charging times**

  How many kilometres do you usually drive? When, and for how long, is the car parked there?

- [ ] **3. Vehicle**

  Which model do you have or plan to buy? What charging power does it support, if known?

- [ ] **4. Responsibilities**

  Who makes decisions about the parking space and building? Record your contacts at the landlord or property management.

- [ ] **5. Other projects**

  Do you have or plan solar PV, a heat pump or additional charge points? Mention possible future extensions too.

My open questions and next step

Photos of the parking space and meter cabinet can help. Keep covers closed and do not carry out electrical work. This checklist helps you prepare; it is not approval for installation or connection.
